Experience

Software Developer, Creator,

03/2023 – present | Remote

Tinker — <https://tinker-base.github.io> 📄

Created an open-source, self-hosted, backend-as-a-service (BaaS) that automates AWS deployment, abstracting away the backend and enabling developers to focus on frontend development.

- Published an npm CLI package that automates deployment and teardown of 26 AWS components for user backends (CloudFormation)
- Led the design and implementation of AWS network infrastructure for public facing backends, and least privilege access for security (VPC, subnet, IGW, route table, NACL, security group, ALB, listener)
- Engineered automatic provisioning of NGINX, PostgreSQL, and an API layer for each user backend on EC2s using Docker, eliminating the need to write boilerplate CRUD routes
- Centralized TLS certificate exchange between clients and backend servers through TLS offloading (Route53, ALB), reducing certificate count from linear growth to constant
- Secured PostgreSQL databases through authentication with JWTs and authorization with roles
- Developed a dashboard for manipulating PostgreSQL databases as a substitute to manually writing SQL queries (React, Tailwind)
- Created RPCs enabling the dashboard to make SQL queries (DDL and DML)
- Authored technical case study — <https://tinker-base.github.io/case-study> 📄

Controls Engineer, Birket Engineering

2017 – 2021 | US, Japan, China

Designed, programmed, installed, and commissioned distributed systems for clients in theme park attractions enjoyed by millions of annual guests.

- Integrated audio/video, lighting, show action, animated figures, and special effects, with live performers using Ethernet/IP, UDP, and custom protocols
- Transformed logging/alarm data from 20 disparate sources and stored in Microsoft SQL Server
- Defended designs to Engineering Safety and government auditors for public opening approval
- Trained 100+ technical staff on system operation, troubleshooting, and maintenance

Electrical Engineer (Licensed P.Eng), E2 Consulting

2012 – 2017 | Canada

- Designed, programmed, and managed control system projects for clients (up to \$1M)

Engineer/Developer (Co-op Student), Ericsson, Nokia

2009 – 2011 | Canada

- Created network traffic test scripts on edge routers for hardware qualification

Skills

Languages & Frameworks

JavaScript, Node.js/Express, Ruby, Go, Sinatra, React, Redux, SQL

Tools

PostgreSQL, MongoDB, Docker, NGINX, Wireshark, Linux, Git

Cloud

AWS (CloudFormation, EC2, ALB, S3, VPC, IAM), DigitalOcean (Droplets), Heroku

Education

BASc Electrical Engineering with Distinction,

2007 – 2012

University of British Columbia

Electrical/Computer engineering coursework

Software Engineering, Capstone Program, Launch School

2022 – 2023

Mastery-based curriculum of software engineering fundamentals. launchschool.com/employers 📄

Professional Engineer License, APEGA

2017
